

Syllabus

Department: Division of Library and Information Science

Course Number and Title: LIS 230 Introduction to Digital Libraries

Bulletin Description: [25 words maximum]

This course provides knowledge required to understand the processes and techniques involved in creating, organizing, presenting, and using information within the digital library environment.

Prerequisite(s): None

Co-requisite(s): None

Course Objectives:

Objective 1: To equip Digital Librarians with the basic concepts & terminology pertaining to Digital Librarianship

- **Learning Outcome:** Upon completion of this course students will be able to demonstrate knowledge of the basic concepts and terminology pertaining to digital librarianship
- **Objective 2:** To equip future Digital Librarians with the basic skill-sets to effectively deal with challenges within the field of Digital Libraries as they develop digital collections, including information organization & access, digitization & computer automation, and standards for data sharing
 - **Learning Outcome:** Upon completion of this course students will be able to define and provide examples of challenges facing Digital Librarians as they develop digital collections, including information organization & access, digitization & computer automation, and standards for data sharing
- **Objective 3:** To provide future Digital Librarians with an opportunity to explore the digital environment by understanding such issues as intellectual property, copyright, and integrated collections management systems
 - **Learning Outcome:** Upon completion of this course students will understand the digital library environment by engaging in real-world intellectual property rights, copyright, and integrated collections management systems

Program Goals and Outcomes:

1B) Understand the history of human communication and its impact on libraries, and the importance of effective verbal and written advocacy for libraries, librarians, other library workers and library services.

1D) Demonstrate effective communication techniques (verbal and written) used to analyze complex problems and create appropriate solutions.

3A) Understand the principles involved and the developmental, descriptive, and evaluative skills needed in the organization, representation and retrieval of recorded knowledge and information resources.

3B) Demonstrate ability to organize recorded knowledge and information using the systems of cataloging, metadata, indexing, and classification standards and methods.

4A) Acquire, apply, analyze and assess information, communication, assistive, and other technological skills related to resources, service delivery, professionalism, efficacy, and cost-efficiency of current technologies and relevant technological improvements.

5B) Understand and demonstrate ability to interact successfully with individuals of all ages and groups to provide consultation, mediation, and guidance in their use of recorded knowledge and information, including information literacy techniques and methods.
